When you are serious about installing manufactured homes,
You want a SERIOUS TOOL!

M A D E I N

A M E R I C A

Model 480 House-Tug shown maneuvering a heavy home into place in a tight spot on rugged terrain.

The CSI Model 480 *HOUSE-TUG* was specifically designed for installing manufactured housing

Maneuvering in tight places, soggy weather, and rugged terrain is what this machine was created to do!

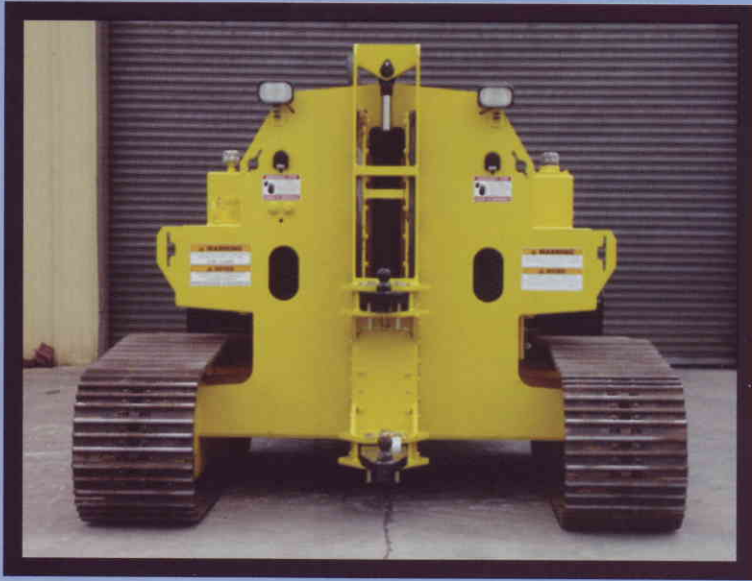

Pulling the heavy loads provided by modern manufactured homes is no problem. With fully hydrostatic drive and the extra power of its 80 h.p. diesel engine, the Model 480 House-Tug can easily move the heaviest units into place!

Lifting from ground level to over 36 inches with a capacity in excess of 26,000 pounds, this machine has the abilities of a giant.

Fingertip radio remote control allows you to easily walk around the housing unit to check clearance from obstacles, tracking all of the tires and final positioning of the unit on the pad.

Over varied terrain with street pads or optional grousers, the flexibility and control of the House-Tug will amaze you. It can actually turn around in its own length and crawl steep inclines to get into and out of places you would never take other machines.

The House-Tug's user-friendly radio remote control gives you full control of this machine. The state-of-the-art industrial control system is weather-resistant and rugged enough to provide years of dependable service.

Standard 26,000 lb hydraulic mast

Standard 20,000 lb hydraulic winch
